

Keka - Help Documentation

NOTE: Ensuring the accuracy of these parameters is essential for the seamless functioning of the payroll connection. Please share the requested details for a smooth integration process.

Before entering your credentials, make sure to enable the [Read all employees](#) permission. *(More details below.)*

To establish a payroll connection, the following parameters are required:

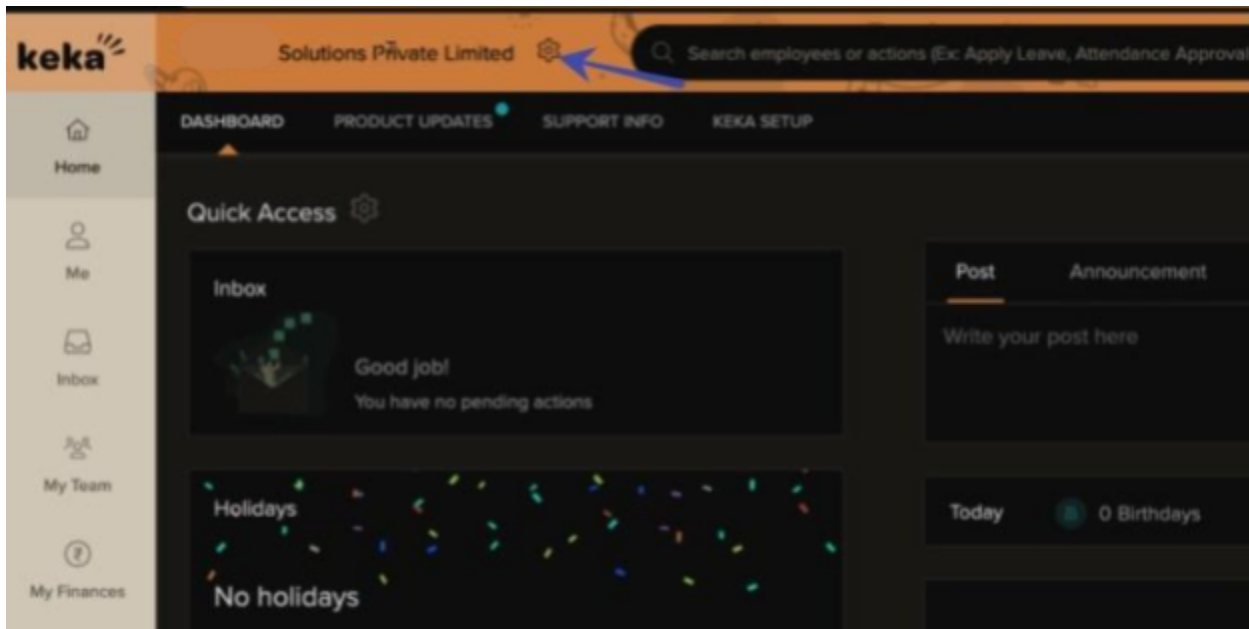

1. HRMS host
2. Client ID
3. Client secret
4. API Key

HRMS Host:

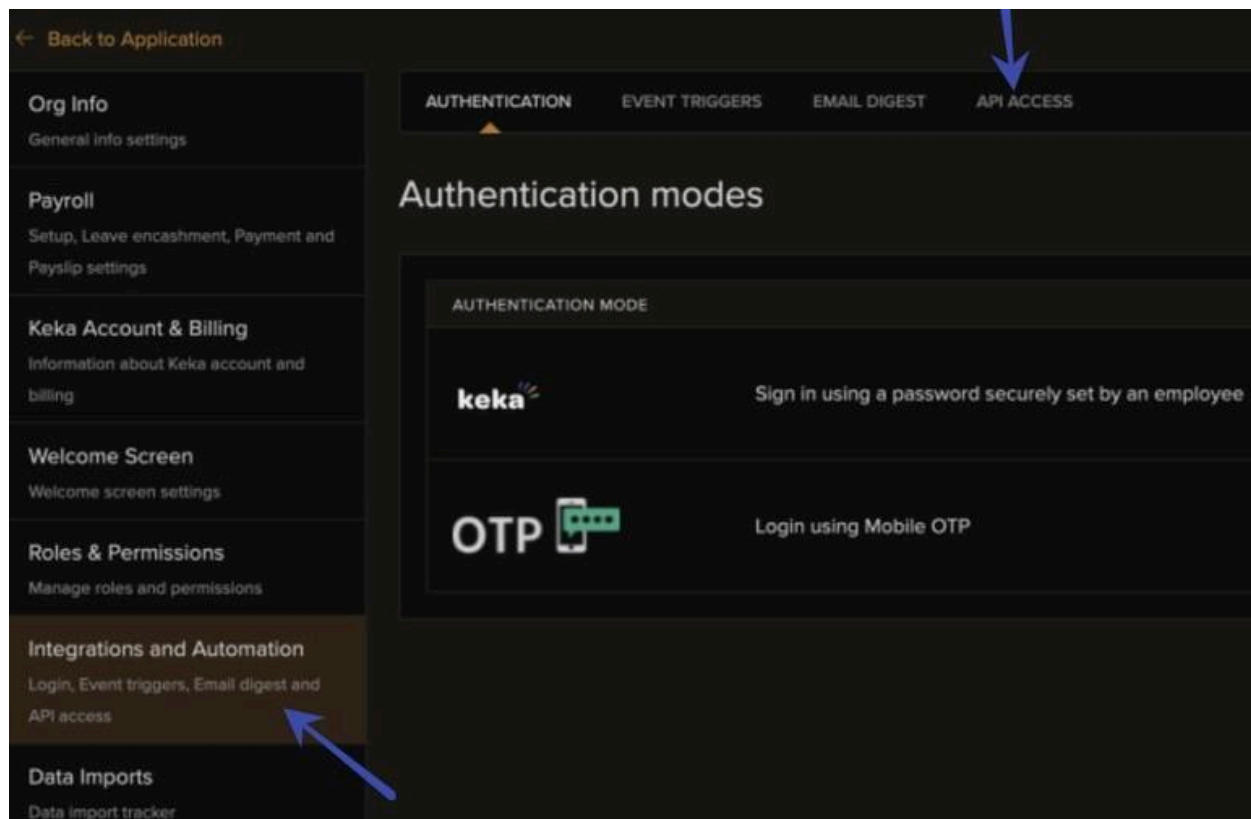

- The HRMS host refers to the designated server or platform where the HRMS is hosted. It serves as the central hub for payroll data and functionalities.
- It will be the domain of your HRMS/payroll login link.
For example, "xyzabc.keka.com"

Generating Client ID, Client Secret and API Key

1. Click on the Settings icon in the top bar (See the image below for reference.)

2. Now go to Integration and Automation (left panel) > API Access (See the image below for reference.)

4. Once you've generated a new key, you'll have all the necessary parameters to establish a connection. Paste these parameters into the portal and give your consent to terms and conditions for a successful connection.
