

Darwinbox Help Documentation

This guide will help you retrieve the required credentials from your Darwinbox Studio admin panel to enable employee data sync.

Prerequisites:

- Admin access to Darwinbox Studio
- API Access module enabled by Darwinbox support
- Internet connection and access to your HRMS instance (e.g. <https://yourcompany.darwinbox.in/>)

Required Parameters

Parameter	Description
<code>username</code>	API user ID provided/generated in Studio
<code>password</code>	Corresponding password for the user
<code>hrms_host</code>	Your Darwinbox host URL (without path)
<code>api_key</code>	Master API key generated in Studio
<code>dataset_key</code>	Key for the specific dataset or module

Step-by-Step Instructions

Step 1: Log in to Darwinbox Studio

1. Visit your Darwinbox Studio admin URL:
<https://yourcompany.darwinbox.in/studio>
2. Log in with your **admin credentials**.

Step 2: Navigate to API Management

1. Go to [Settings](#) → [API Management](#)

2. Click on **API Access** or **API Users** depending on your version.

Step 3: Create a New API User (If Not Already Created)

1. Click on **"Add New User"**
2. Fill the following fields:
 - **Username:** Choose a logical name, e.g., **xxxxxx-api-user**
 - **Email:** Enter your admin or integration email
 - **Role/Scope:** Select **Read** or **Read/Write** access as needed
3. Set and save the **password** (You'll need this for Tartan)
4. Save the user — This completes **username** and **password**

Step 4: Generate API Key

1. In **Studio** → **Integration Settings** → **API Keys**
2. Click on **"Generate New Key"**.
3. Choose the scope as **Employee Master / Payroll Data / Attendance** as applicable.
4. Name the key appropriately (e.g., HRMS-Integration)
5. Copy the **API Key**

P.S. The API key is shown **only once**. Save it immediately.

Step 5: Create Employee Roster Dataset (dataset_key)

To enable granular access to employee data:

1. Navigate to **Studio** → **Datasets** → **Create Dataset**
2. Name the dataset (e.g., Tartan Employee Roster)
3. Choose the **Employee Master table** as your primary data source

4. Add necessary fields (For e.g.):

- Name
- Email
- Mobile
- Department
- Designation
- Salary (if required)
- DOJ

5. Save and **publish the dataset**

6. Copy the **Dataset Key** from the dataset summary

This key (called **dataset_key**) is required to fetch the employee roster securely.

Step 6: Confirm Your HRMS Host

Your **hrms_host** is typically:

<https://yourcompany.darwinbox.in>

No trailing slashes (/) or paths needed
