

GreytHR

NOTE : Ensuring the accuracy of these parameters is essential for the seamless functioning of the payroll connection. Please share the requested details for a smooth integration process.

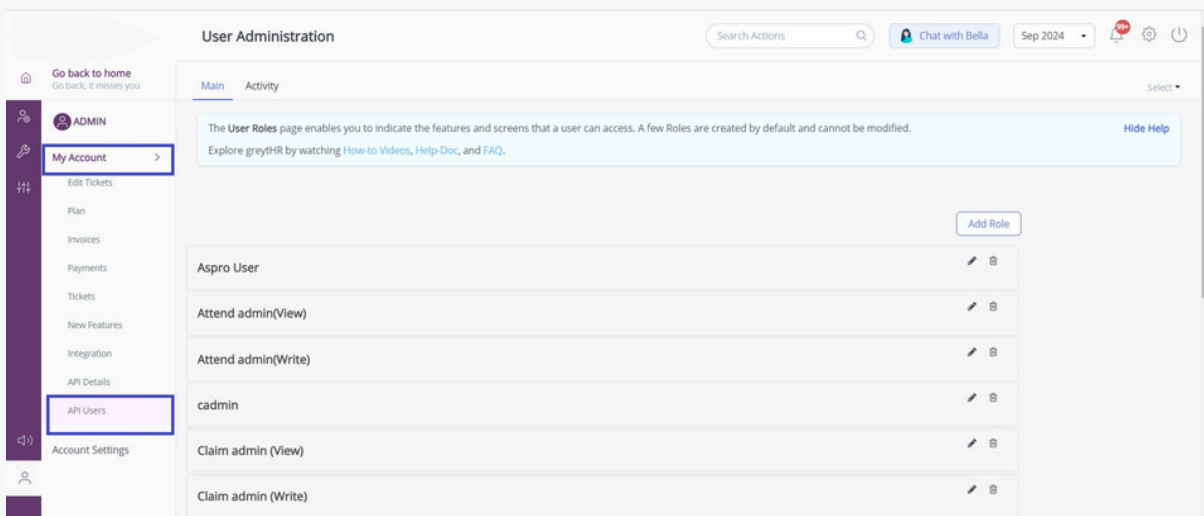

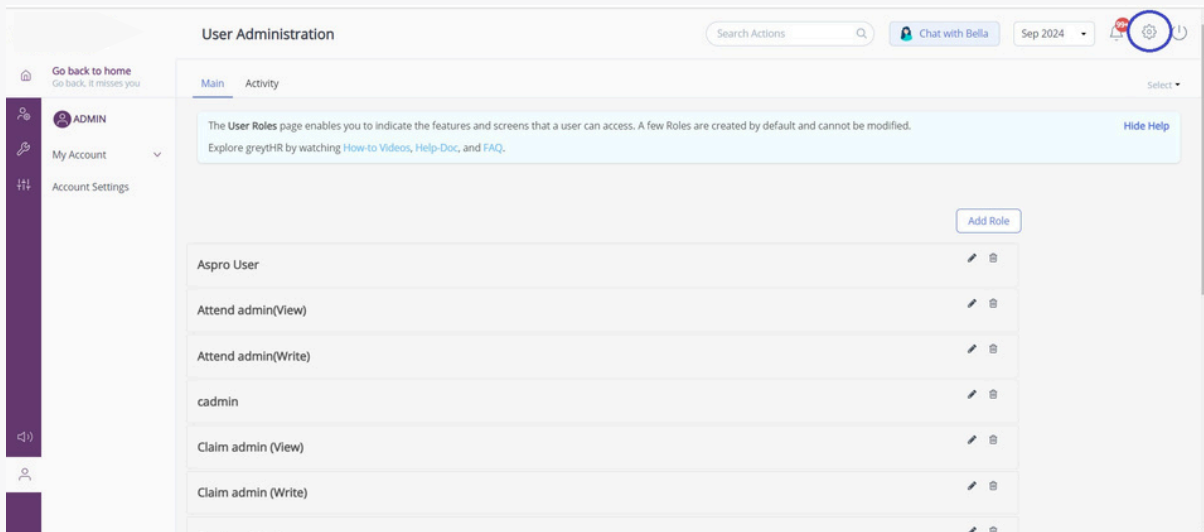

To set up the greytHR payroll connection, you'll need the following parameters:

1. Username
2. Password
3. HRMS host

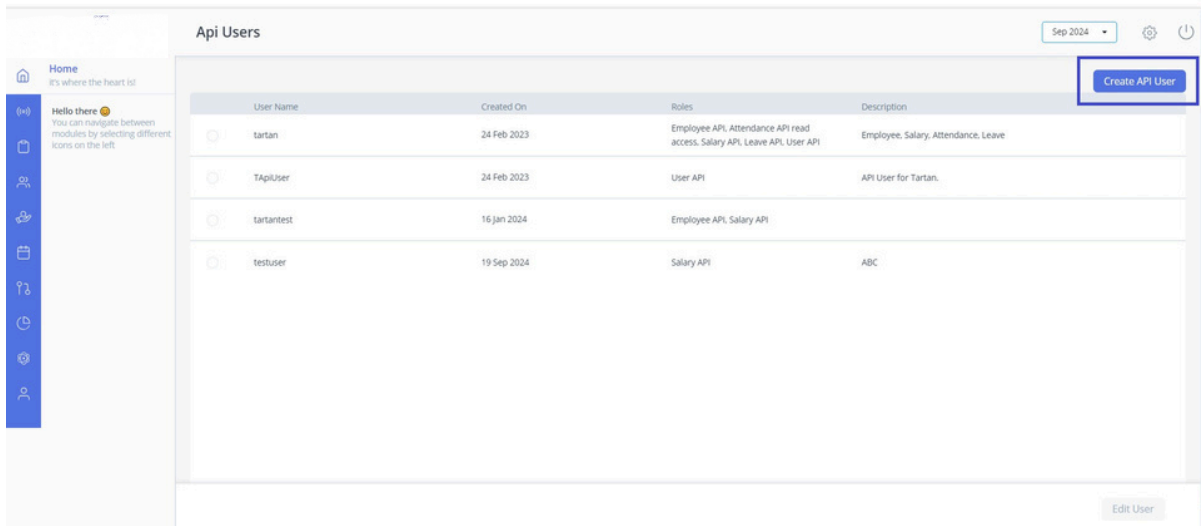

HRMS Host:

- The HRMS host refers to the designated server or platform where the HRMS is hosted. It serves as the central hub for payroll data and functionalities.
- **HRMS Host:** HRMS host will be the domain of your HRMS/payroll login link.
For example: "xyzabc.greythr.com"

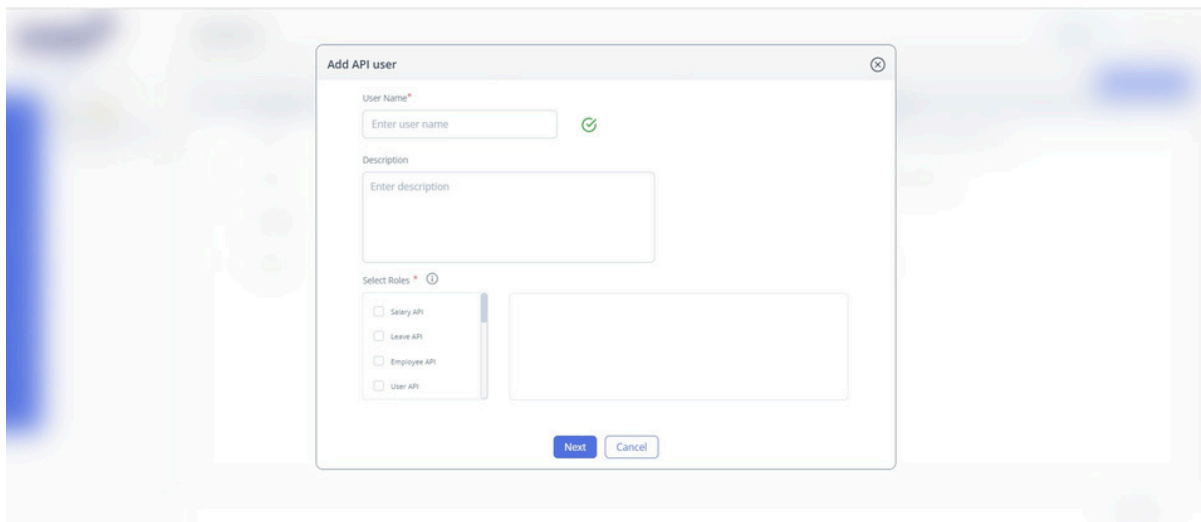

For username and password, you need to create an api-user. To generate, please go to settings (top right corner) > My account > API users.

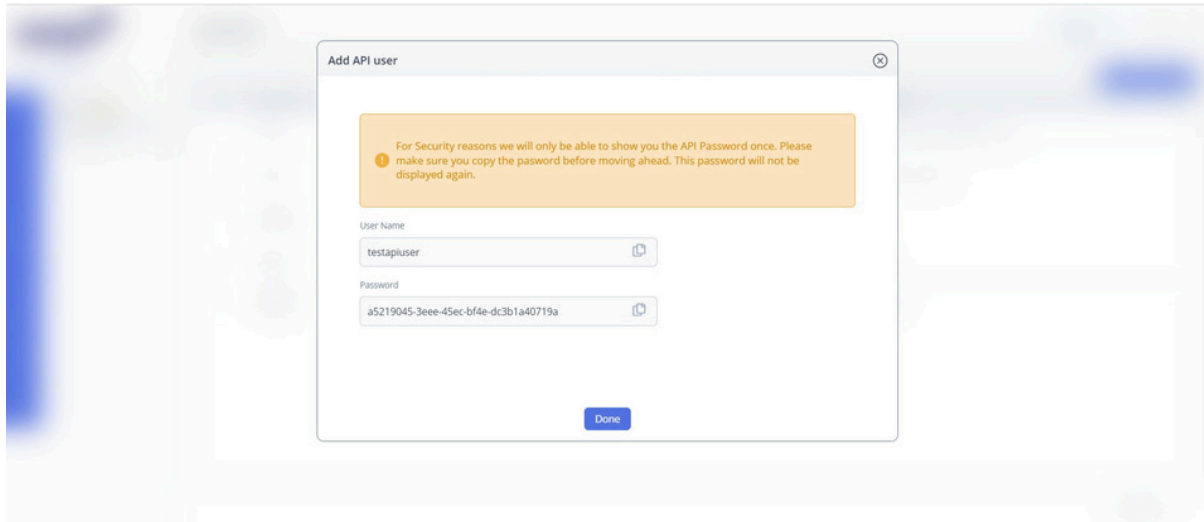

Now you will be able to view the list of all the API users. If you are not able to view api user, click on **Create API User** .

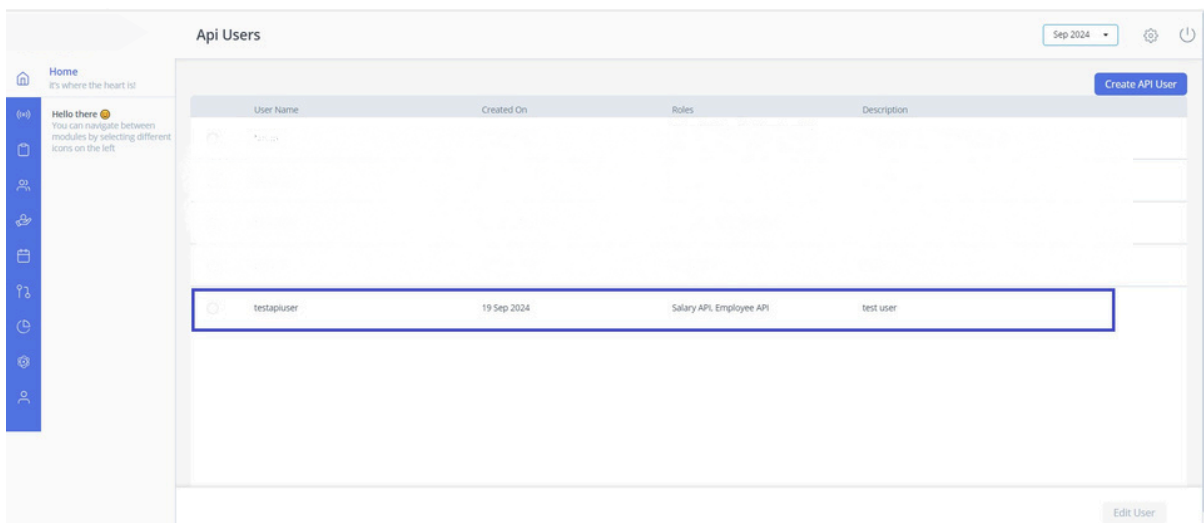

Enter Username, description and select the required roles for successfully creating an API user. Finally, Click next to generate the password.

NOTE: Make sure to copy the password and keep it safe with you.

You will be able to view the newly generated API user.

NOTE: If API access is currently disabled, please reach out to your designated point of contact at greythHR to enable it for your team. Once the API is

activated, greytHR will provide you with the necessary token using which you can create a successful connection.

To connect with the greytHR team, you can also raise a ticket through your admin account.
